

2016-2017 GIFT CATALOG

WATER PUMP AND WELL

Here is a story of how this gift helps others

For a community that sits in the hills of Leogane, finding water has been difficult. But the search for clean water was soon over when World Renew began drilling a well that would help thousands of people in need.

Clean water is essential for families to drink, cook, clean, wash, and grow food. With your gift of a water pump and well a community gains access to safe water that they can use for daily tasks. Clean water also helps communities practice good hygiene and sanitation to prevent the spread of disease.

For the community in Leogane, a well has been transformational. By bringing safe, clean water close to home women and children no longer have to walk miles to find water. Women have been able to spend their time doing meaningful work and children have been able to go to school.

Chronic disease from drinking contaminated water has drastically decreased because community members do not have to share water with their livestock.

To further help the community World Renew built a reservoir to collect rain water. This water will be very helpful for a farmer tackling the area's pressing agriculture needs.

The gift of water to a community in need helps each family create lasting change and live a life with less illness.
