

Thank you for giving the gift of a drip irrigation system

The dry season challenges farmers. Traditional farming techniques, and variations in the climate that include decreasing rainfall and recurrent drought, leaves farming households hungry. **For families that rely on what they grow in order to live, being able to grow food year-round is a life-changer, a true source of abundance.**

World Renew invests in agricultural training around the world because having plenty of food and fruitful work are parts of an abundant life. We train and support eager farmers in agricultural methods to withstand the climate challenges they face and to get the most out of their small plots of land, while preserving their soil for the future. **Your gift of a drip irrigation system helps farmers grow enough food to eat year round.**

A drip irrigation system allows farmers to provide a slow, direct stream of water to their crops. Farmers are surprised by how little water they need to maintain healthy produce, and that they are even able to cultivate new fruits and vegetables that promise not just varied nutrition for the family but a good return at the local markets. **Your gift of a drip irrigation system provides household farmers with training in building, using, and maintaining the system, as well as access to the supplies they'll need to build it.**

World Renew farmers have had tremendous success with drip irrigation in Kenya, where drought and decreased rainfall have dramatically impeded Kenya's household farmers. David Njoroge Kari is a World Renew "champion farmer" who has adopted and now promotes the agricultural methods introduced there. He is a big fan of drip irrigation. "I only have to use a little water," he says, "and it is not too exhausting. I dream of a future where our children have enough food, like we used to have when I was little."

This year World Renew will use your gift to help farmers in Cambodia. For villagers farming on hilly slopes, drip irrigation promises all it has delivered in Kenya: less back-breaking water-hauling, better production, improved nutrition, and increased income. **Abundance!**

THANK YOU

"... I HAVE COME THAT THEY MAY HAVE LIFE, AND HAVE IT TO THE FULL."
