

Thank you for giving the gift of a hand-washing station

Infection and disease make people sick, sometimes fatally, every day. **The simplest and cheapest tool in the world to fight infectious diseases is handwashing.**

The simplicity of handwashing may cause us to forget that, while germs and their effects have been studied since the 16th century, hand washing was not advanced as a means of fighting infection and disease until the 19th century—and it was only in the 20th century that governments began campaigning for handwashing as a public health strategy.

For some communities, lack of running water and understanding of the link between health and handwashing tragically continue to sicken and kill people today. **Your gift of a handwashing station equips World Renew and local partners in Guatemala, Kenya, and Uganda to strengthen communities’ understanding of the connection between health and handwashing, bringing more abundant life to many.** Easily built with readily available, local materials, a handwashing station will keep people healthy, ready for school and work — more opportunities for abundant life!

Healthier people live more abundant lives, and that is exactly what God wants for His children.

THANK YOU

“... I HAVE COME THAT THEY MAY HAVE LIFE, AND HAVE IT TO THE FULL.”

—John 10:10
